Ready-made drag chain systems for
mobile industrial automation, crane
and material handling technology

TKD drag chain systems, ready-made for your application.

Ready-made system solutions are an important part of today's automation technology, crane systems and material handling technology. Plug & Play solutions significantly reduce procurement and installation efforts and offer tailor-made high quality products for individual applications.

Entire TKD drag chain systems are the economical solution for the provision of secure data and energy transmission, even for most diverse applications:

- Engineering, robotics
- Plant engineering
- Crane systems
- Material handling technology
- Wash bays
- Agricultural technology

TKD - the specialist in drag chain systems for over 30 years.

TKD is the specialist with in-depth experience in the development of cables for drag chain applications. Over 30 years ago, with the aid of a customer, TKD designed, developed and manufactured the first marketable PELON® PUR cable. This led to the foundation and commencement of TKD's ability to advance market-orientated solutions. Aside from a comprehensive product programme on cables, drag chains and accessories, TKD designs and manufactures drag chain systems, meeting individual solutions for demanding applications as well as offering added value to its customers.

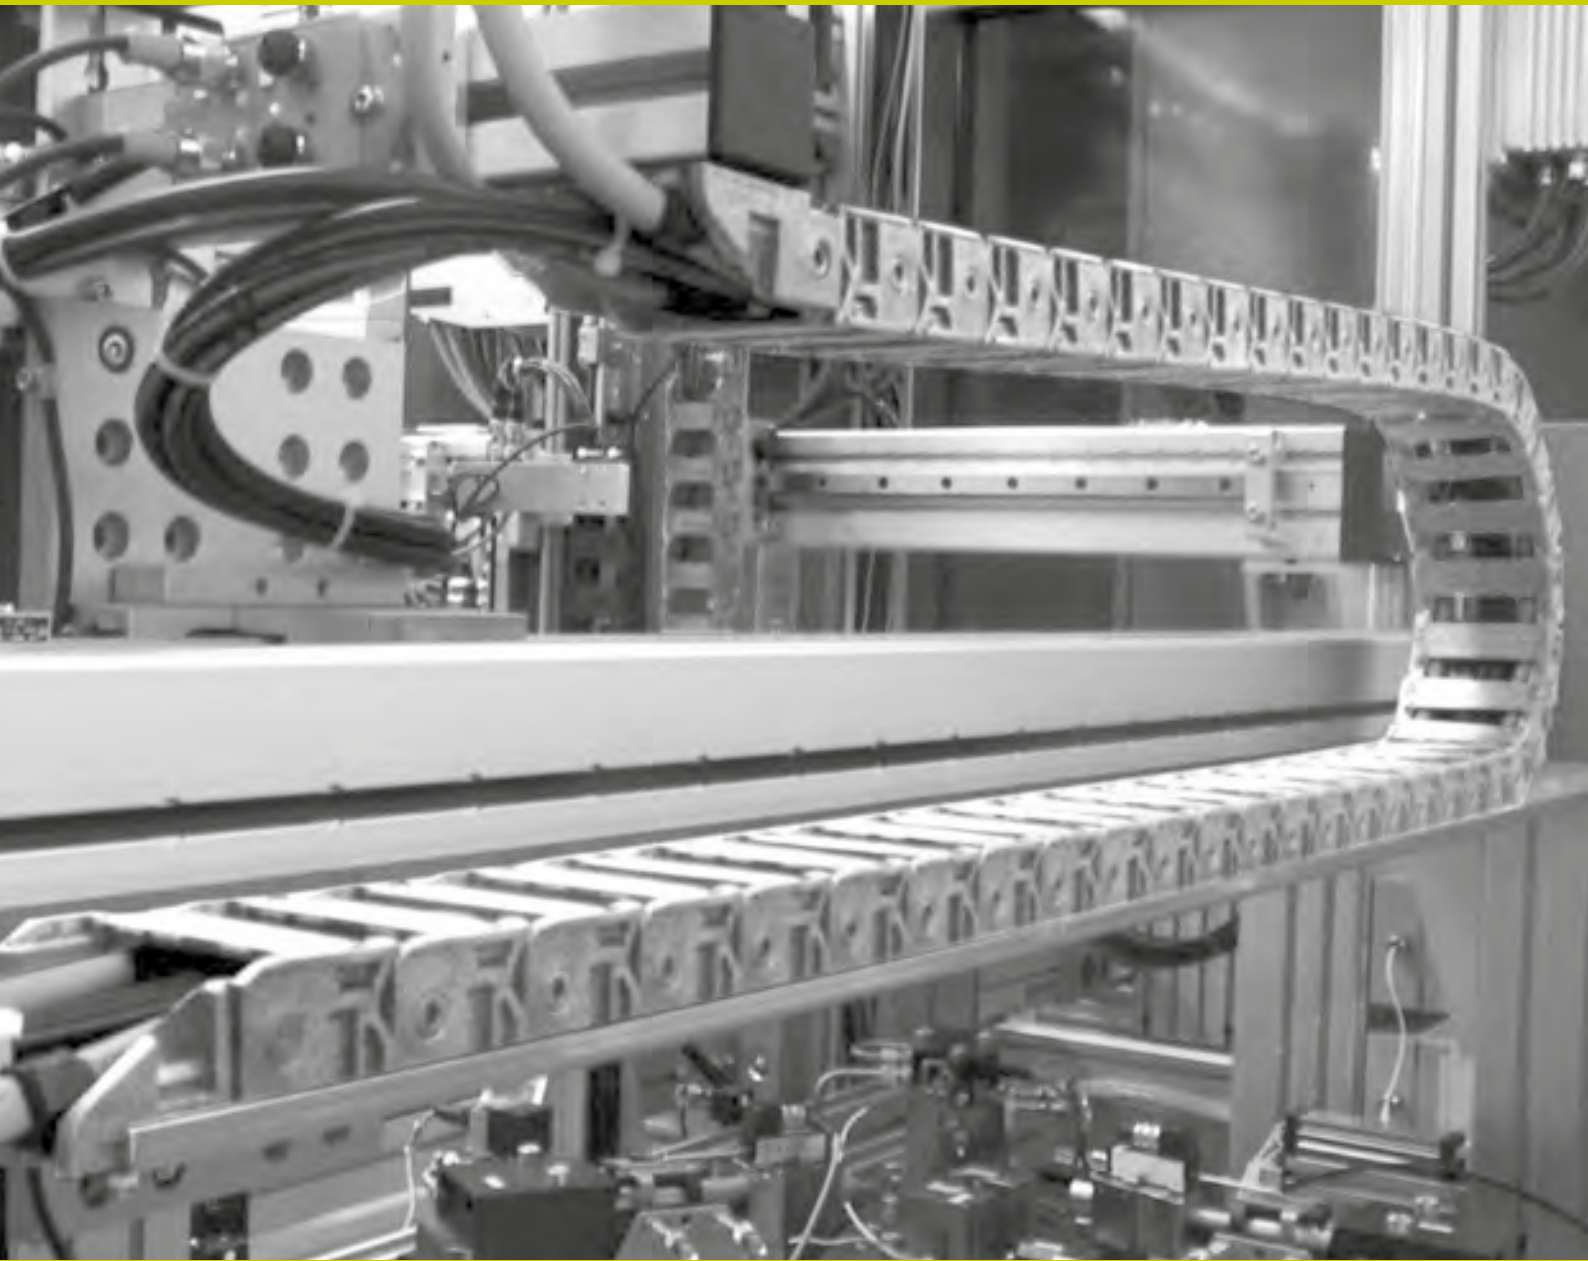

Extreme requirements

Highest demands on the quality of drag chain systems are placed in automation, drive as well as crane and material handling technology. Further requirements are flexibility and robustness. Extreme frequency and high acceleration and deceleration speeds, travelling and lifting speeds must also be mastered as well as abrupt changes in direction or long travelling distances.

Changing weather conditions add additional stress to the material and assembly.

The solution is ready-made TKD drag chain systems.

The all-in-one solution: TKD drag chain systems offer an all-round carefree package.

Customer-specific and ready-made drag chain systems are offered by TKD as a comprehensive service package.

- Competent and individual application consultation
- Planning and construction of the entire drag chain system including all components
- Organisation of all components: cable, chains and accessories
- Customer on-site support
- Delivery of the entire drag chain system as plug & play solution
- After sales service

TKD's all-in-one solution: One-Stop-Shopping and Plug and Play with many advantages.

1

System solutions allow concentration on the core business

5

Safety of all components, processes and procedures through certified quality

2

Plug and Play guarantees immediate ready-to-use products

6

Durable, robust; with high grade materials

3

Utilize the competence of over 30 years' experience in drag chain cables

7

Space saving solutions using compact constructions

4

Reduction of procurement costs using fewer suppliers

TKD system solutions: A name you can trust.

TKD KABEL GmbH is one of the leading suppliers worldwide. The special cables for drag chain as well as crane and material handling applications have an outstanding position in the comprehensive all-in-one product portfolio for cable and system solutions for a diversity of industrial applications. TKD is part of the Dutch THK Group with its headquarter in Haaksbergen (NL).

TKD drag chain systems: Collaboration with the industries' best.

TKD works together with the best in the industry for the assembly of complete ready-made drag chain systems. The energy drag chains are manufactured in co-operation with Murrplastik and the assembly of the chain system is carried out at the company's own production sites.
